EXPERIENCE

KPMG, Toronto — *Software Engineer Consultant*

MAY 2022 - JUNE 2023

Worked closely with clients in fulfilling their project needs. Tasked on Web-app and platform migration projects. Primarily through Microsoft Azure and Google Cloud Platform. Used multiple frameworks, including ReactJS and ASP.NET. Worked with CI/CD tools and pipeline settings.

- Developed software to support projects, ensuring all users were trained in its optimal use.
- Developed efficient code that conforms to coding standards to safeguard efficiency and reliability.
- Monitored and maintained production codebases and development versions to ensure code quality.
- Communicated with clients and internal/external team members to convey goals and requests.
- Utilized pipelines and associated tools to maintain consistent uptime and delivery.

Staples, Vaughan — *Technology Associate*

AUGUST 2021 - APRIL 2022

Assisted customers in selecting solutions and machines that optimized and accelerated their workflow, as well as their future plans for success. Educated customers on foreign tech concepts that would benefit their daily lives.

- Suggested efficient solutions for unique use-cases regarding hardware and software.
- Informed customers about relevant news and information that would benefit their product decisions.
- Simplified advanced technological concepts to help convey key points and ideas.

EDUCATION

George Brown College, Toronto

Degree - Computer Program Analyst

SEPTEMBER 2019 - APRIL 2022

This program excels at giving students the experience and skills needed for a wide variety of software-based careers. This includes experience in web, open-source, Unix, and object-oriented languages.

- Excelled with open-source frameworks (NodeJS, ReactJS) for web applications.
- Designed optimized mobile applications (iOS, Android, and hybrid) using native tools and open-source platforms.
- Completed Cyber Security training through Cisco based on hardware and software implementations.

PROJECTS

People Planner — *Planning Aid*

ReactJS, Firebase

A web-app that helps friend groups plan and organize together in a more structured, streamlined process. Built using React.js and Firebase, using Google Authentication

Ambient Spotify — *Passive Music Viewer*

ReactJS, Spotify API

A simple now-playing screen for Spotify. Featuring live updates, artwork-based coloring, and streaming. Built using React and Spotify login and API.
